Thissen & Stecher BV produces blancher (continuous cooking lines). This blancher is particularly suitable for the production of food such as meat, vegetables, potato products and vegetarian products. A constant temperature and correct water circulation are of great importance here. A horizontal screw conveyor is used for the transport in the blancher. For emptying, a conveyor belt or a screw conveyor can be used, which can be placed in line with the blancher or perpendicular to the blancher. The blancher can be steam or electrically heated. The unit is manufactured with high-quality components.
